## Summary

My research interests are at the intersection of computer vision, computer graphics, and machine learning. I work on research that typically involves applications in healthcare and/or augmented reality. Currently, I'm working toward a future where wearable, spatial computing devices, such as augmented reality eyeglasses capable of all-day use, are contextually aware and personalized to the benefit of users and their goals (e.g., human memory enhancement, becoming healthier). Prior to my current interests, I've worked on synthetic data generation pipelines for health sensing, 3D reconstruction from endoscopy videos, and health insights agents that leverage large language models. **I'm actively seeking a full-time position in industry or a postdoc in academia, with a focus on translating research in computer vision, computer graphics, and machine learning into healthcare domains.**
