Summary

My research interests are at the intersection of computer graphics, augmented reality, and virtual reality. I do research that typically explores these topics with an emphasis on having an outcome that directly benefits applications in areas such as healthcare, entertainment, and robotics. Prior to my current interests, I've worked on synthetic data generation pipelines, 3D reconstruction from endoscopy videos, and health insights agents that leverage large language models. I generally like working on things that are as effective and accessible as possible in both academia and industry.
